

SOLUTION SHEET

Ellucian Quercus Designed for Conservatoires

Manage applications and streamline work efforts with real-time updates

A UCAS Conservatoires' performance hinges on clear, direct connections between every department, every prospect, and every constituent within physical and virtual reach of your campus. Your constituents are busy managing endless details and pressures. Better connections mean better everything: more effective communication, better responsiveness, more efficient processes and more informed decisions. Quercus enables those connections and has a platform to create an integrated digital campus. It's a robust student information system that provides collaboration and a productive online experience. Quercus Admissions can help your conservatoire with key benefits, including:

- **Managing the application lifecycle to process for UCAS Conservatoires**
- **Reducing duplicate workstreams by sharing real time updates across departments**
- **Gaining visibility into decision workflows and relevant decisions on applicants' choice level**

Total visibility

Quercus Admissions supports UCAS Conservatoires service through its connection to UCAS and retrieves the UCAS Conservatoires applications or applicant data on a course level. As an administrator, you can view the application data and take decisions on applicants. By having one source of truth for Conservatoire applications, providing real-time decision making, seamless communication and instant updates for both the applicants and institutions, you are in the driver's seat. All with the reassurance that Ellucian Quercus is regulatory compliant.

Features to streamline workflows

There are many efficiencies that administrators using Quercus leverage such as:

- UCAS reference data task to populate reference values when processing applications on a choice level
- Capture application data in UCAS Conservatoires views from UCAS's Hercules on a choice level so applications can be processed efficiently
- Apply an audition pending status to applicants on a single or bulk decision page
- Create a pre-registered student when a UCAS Conservatoires candidate is in GU/1 status – individually or as a bulk option
- Indicate study type, first instrument, and second instrument fields on the single and bulk decision pages
- Store and send instrument details along with many other transactions to UCAS
- Display course and instrument data
- Get an overview of the course and instrument data when an applicant applies to two different first instruments with the same course code
- View the choice details applied by the applicant at other institutions
- Resolve errors on applicants that are acknowledged by UCAS and amend details to fix them
- Lock the UCAS decisions for applicants and allow only confirmation amendment and withdrawal transactions

Application flexibility

UCAS Conservatoires applicants can apply for the same course instance (choice), but for different instruments in Quercus. A UCAS Conservatoires applicant could submit two separate applications for the UCAS course code with two different instruments. Quercus maintains and applies the correct decision codes for the UCAS Conservatoires applications. Users can view these codes in values of the 'Decision/Replies' column, which the system displays on the corresponding pages in the admissions application.

Trouble-free implementation and maintenance

Ellucian manages Quercus in the cloud, so you don't have to worry about IT maintenance. Ellucian handles all monitoring, performance tuning, support and managing the delivery and implementation of any solution upgrades. Our implementation approach is resourced with highly trained and experienced Ellucian staff or our certified partners, all of whom focus on your higher education business outcomes.

Charting the digital future of higher education with cloud-ready technology solutions and services, Ellucian serves more than 2,700 customers and 26 million students in over 50 countries.
