

Ellucian Ethos Data Connect

Create and Manage Your SaaS-Safe Integrations and Business Processes via Ellucian's Low-Code Tool

Connecting solutions maximizes the value of your technology. Many institutions, however, have hundreds of systems to integrate — some from Ellucian and others from third parties — without a central solution to manage them. And even when those systems are integrated, institutions still need to gather siloed data from various locations, organize it into a consistent format, and activate it for analysis.

Third-party integration tools are expensive to learn and maintain. And connections that require an on-prem integration servers get in the way of long-term plans for SaaS. Institutions don't need more customizations to meet their integration needs. They need Data Connect.

With Data Connect, institutions can easily integrate disparate data sources and formats into the system of record and the data warehouse. A fundamental part of the Ellucian SaaS Platform, Data Connect empowers IT staff with a low-code tool to quickly build serverless APIs and integrations across the Ellucian Product Suite and with third parties. This enables technical users to seamlessly hand off integrations to non-technical users to manage the business.

Allowing for bulk updates and near real-time updates to the system of record, Data Connect helps create a more efficient, agile technology ecosystem.

Create Seamless Integrations

- Data Connect integrates with Ethos without altering third-party solutions while supporting modern, event-driven API standards
- Packaged integrations help eliminate redundancies while supporting critical regulatory systems
- Data Connect eliminates the need for middleware to host an authorization proxy when calling APIs from custom cards
- Built for SaaS while remaining compatible with on-prem systems, Data Connect can support institutions no matter where they are on their SaaS journey

Connect and Empower

- Equipped to build and manage integrations quickly, IT staff can spend more time on value-adding strategic initiatives
- An intuitive self-service interface enables IT staff to create, update, and manage data process flows before passing off to non-technical users to manage job scheduling
- Data Connect Serverless APIs increase ease of adoption of Ellucian Experience by simplifying and aggregating APIs for seamless data population in cards or page extensions and workflows
- As a common integration platform for ERPs and Ellucian Insights' data warehouse, Data Connect helps institutions leverage data from any source to better inform decision-making
